Dear Students,

we cordially invite you to take part in our program "**Sustainable micro-mobility with Light Electric Vehicles - LEV**" as part of the Japanese-German exchange program.

This program is dedicated to sustainable micro-mobility using LEVs and offers a great opportunity to learn more about eco-friendly modes of transport.

*Cargo bikes (picture source: Prof. Zipser, HTW Dresden)*

The program includes a variety of activities including lectures, discussions, presentations and hands-on exercises. Our German and Japanese speakers will cover various topics related to sustainable micro-mobility and give you valuable insights into the current situation and future developments.

The preliminary program (pre-education) will take place in the **summer semester 2023** and the main program in the **last two weeks of September 2023**. The exact dates can be found in the program description.

We hope to welcome you to our program and look forward to discussing the important topic of sustainable micro-mobility with you.

In September 2023, about 20 students from Chiba University will visit the HTW Dresden.

With our best regards, the program committee 2023!
